Solidarity Forms The Future
Automotive Components – Your Global Partner

voestalpine
ONE STEP AHEAD.
One Name. Four Competences.

Welcome to Automotive Components

Our Automotive Components business unit, with its 13 manufacturing sites around the globe, strives to provide optimum support to our customers on their way toward globalization and new automotive lightweighting solutions. Aiming to be the best partner, we will focus our know-how in 4 business segments. Each segment will be expertly managed and coordinated by a so-called Center of Competence. This provides competent one-face-to-the-customer service with local implementation power.

Benefits for customers:

- **Worldwide customer proximity** – through an international network of manufacturing sites and local project handling

- **Specialized know-how** – due to our focus on 4 business segments and industry-leading materials expertise and processing competence

- **Efficient solutions** – through synergies between our manufacturing sites and the alignment of their capacities
A sign of oneness

From now on, the companies you are familiar with will appear under one common name. This documents their organization as one single entity also in external communications.
Cold Stamping & Assemblies
Efficiency Forms Advantage

We are your specialist for cold forming. For our components, we combine innovative joining techniques and efficient automation solutions in cost-effective high precision series production environments.

Competences:
- Structural components and assemblies made of steel and aluminum
- Individual logistics concepts
- Surface finishing
- Forming competence for UHSS materials with up to 1,200 MPa

Your Competence Center:
voestalpine Automotive Components Dettingen GmbH & Co. KG/ Germany
Lighter, stronger, more stable, and highly corrosion resistant. We raise the bar through indirect hot forming and world-first direct hot forming of hot dip galvanized strip steel into highly corrosion resistant lightweight components.

Competences:
- One-stop provider for hot forming of hot dip coated material
- phs-ultraform® – the original for galvanized components press-hardened in the indirect process
- phs-directform® – the pioneer for galvanized components press-hardened in the direct process

Your Competence Center:
voestalpine Automotive Components Schwäbisch Gmünd GmbH & Co. KG/ Germany
Side walls, roofs, hoods, fenders, and many other components. We are your Class-A partner for large-sized visible steel and aluminum parts. Our spare parts concept ensures the reliable supply of parts beyond model lifecycles.

Competences:
- Complete chain of services: from feasibility analysis to series production
- Manufacturing of complex assemblies with a vast variety of joining technologies
- Spare parts production: implementation of spare parts production on universal manufacturing facilities through process reengineering for sustainable aftermarket solutions
- State-of-the-art press lines for pressing forces between 400 t and 2,800 t, as well as 6 consecutive presses
- Table sizes up to 5,000 x 2,500 mm

Your Competence Center:
voestalpine Automotive Components Bunschoten B.V./Netherlands
Tailored Blanks

Individuality Forms Series Success

Our laser-welded blanks are the answer to the contradictory requirements of enhancing crash safety and reducing weight. Building on our experience and expertise, we provide custom-tailored solutions, even for complicated component geometries with defined strength profiles in a very wide geometry spectrum (weld seam lengths from 84 to 3,600 mm).

Competences:
- Laser-welded steel and aluminum blanks
- Custom-tailored solutions in terms of steel qualities and thickness combinations
- Expertise in simulation and engineering
