

CoilTechnica Hannover 2010

This year voestalpine would like to take the opportunity of the first CoilTechnica Exhibition in Hannover to meet with you, exchange information and to introduce new product developments.

Our company is among the leading quality producers of non-grain-oriented electrical steel strip and is the market leader in semi-finished products. The innovative isovac® electrical strip product family developed by voestalpine Stahl GmbH provides optimized benefits to their customers with respect to energy efficiency and process optimization.

A great deal of emphasis in the development of innovative electrical strip grades is being placed on maximum energy efficiency (motors) and ambitious CO₂ reduction targets to be achieved in alternative drive systems (automotive) and alternative energy (wind and water). Close collaboration with our customers and our dedication to meeting their individual needs are the basis for our continuing development of high-quality products. As a company devoted to a clean environment, we have exclusively used chromium-free, water-based insulating paints since we began manufacturing electrical steel strip.

Our technical experts have decades of industrial experience and comprehensive expertise in providing calculations, repairs, condition monitoring and other services for electrical motors. The experts also monitor the condition of transformers and troubleshoot any existing problems.

We are very much looking forward to welcoming you at our fair stand (Hall 6, Stand F16).

Wolfgang Reisinger, Senior Sales Manager, Electrical Steel

Martina Larndorfer, Key Account Manager, Electrical Steel

Franz Dorninger, Quality Manager, Electrical Steel

Roman Sonnleitner, Quality Engineer, Electrical Steel

Verena Bonelli, Product Management, Electrical Steel

Franz Waizinger, Sales Manager, Technical Service
