

MANAGEMENT, IMS & EHS POLICY

voestalpine BÖHLER Aerospace is one of the world's leading manufacturers of forged products for the aerospace industry as well as for other safety- and quality-critical industries.

We are **committed** to the **continuous and sustainable improvement** of our performance in the areas of **quality, environment, energy, occupational safety and health**, in order to reliably meet or exceed all binding requirements and expectations of our customers, employees, legislation and other interested parties.

As a **sub-supplier to the aerospace industry without own authority approval**, we actively support our customers' **Safety Management Systems (SMS)** by identifying safety-relevant risks at an early stage, communicating them transparently and reducing them effectively.

Our **Integrated Management System (IMS)** forms the basis of the corporate strategy and provides the binding framework for all strategic and operational decisions.

People

Our employees are essential carriers of competence, responsibility and safety awareness.

We foster an open, fair and learning-oriented quality and safety culture (Just Culture) in which safety-, quality-, environmental- and health-related topics can be openly communicated, reported and addressed.

Through continuous training and development, clearly defined responsibilities, and a safe and healthy working environment, we ensure the professional competence as well as the process and performance capability of the organization, while at the same time contributing to the prevention of injuries and work-related ill health.

Processes & Performance

Our processes follow a risk-based approach and are controlled and continuously improved through appropriate objectives and key performance indicators.

By continuously developing our IMS, we systematically identify and assess risks and opportunities, effectively analyze deviations and near-miss events, and take into account both technical and human factors in order to ensure stable, safe and sustainable processes.

In doing so, we make an effective contribution to product, process and flight safety throughout the supply chain.

Business Partners

Cooperation with our business partners is based on transparency, reliability and clearly defined requirements.

Quality-, safety- and EHS-related requirements are clearly communicated, implemented and monitored throughout the supply chain.

Compliance & Sustainability

Compliance with all applicable legal, normative, contractual and internal corporate requirements is a fundamental principle for us.

We are committed to complying with all applicable export control regulations at EU, national and international level, including the U.S. Export Administration Regulations (EAR) and the International Traffic in Arms Regulations (ITAR), as well as all binding export control directives of the voestalpine Group.

In line with the voestalpine sustainability strategy, we commit ourselves to the prevention of environmental pollution, the reduction of environmental impacts and accident risks, the continuous improvement of energy-related performance, as well as a responsible use of energy, resources and raw materials throughout the entire product life cycle.

Safety, sustainability and economic success are inseparably linked for us and form the basis of our future-oriented actions.
