Golden Oak is now a very competitive product in the area of wood design and is characterized by a friendly shade of brown. In spite of its very defined wood grain, the overall impression is not too dark and, true to its name, conveys durability as well as hardness.

More than just environmentally compatible – the ECO pioneer

colofer® is a true pioneer when it comes to protecting the environment and employee health and safety. As early as 1998, voestalpine developed an environmentally compatible method for the production of colofer® by completely eliminating chromium and chromate from the process, without compromising the excellent product performance and the length of guarantee periods.

voestalpine operates the cleanest and most environmentally compatible steelmaking plant in Europe and more than lives up to its reputation as an environmental pioneer.

More than just quality – high quality made in Austria

High-tech steel strips produced by voestalpine and paints from renowned European manufacturers are the basis for the consistently high level of quality that is characteristic of colofer®. Thanks to our integrated steel mill at the Linz location, we always have full control of all value-adding process steps involved. colofer® is produced in a single facility using high-precision measuring methods. As a result, our customers benefit from consistently high quality and from products that strictly comply with the agreed specifications.

More than just products – colofer® service

We consider services to be part of the product itself, which is why we also strive for perfection in our services. Find out more about our colofer® services!

If you're reading this, your successful future has already begun.

Together with us, you are always one step ahead because we offer more than optimized products made of high-quality material.

- If you are looking for customized solutions, we will be pleased to work with you on the creation of new products and services.
- If you are looking for new ideas on materials, technologies and services, we want to help you find them.
- If you are looking for a fair and reliable partner, you are at the right place. We know that we can only be successful together with our customers when they benefit as much as we do from our partnership.
- Our customers take advantage of the most widely used technology: Two thirds of the steel produced worldwide is made using the LD process, and we're rather proud of that.
