Product Description

BÖHLER W403 VMR is a vacuum remelted material which was developed as a problem solver for tools for where a standard solution is no longer sufficient. The steel can be assigned to the 5% chromium steels and has a very high purity due to the special manufacturing technology. In addition, the increased molybdenum content leads to improved thermal resistance as well as wear resistance, which makes BÖHLER W403 VMR an all-rounder that is often used for highly stressed dies in the die casting sector. In addition, Böhler W403 VMR has outstanding polishability. For this reason, the steel is also popular as a molding material for plastic injection molds.

Process Melting

Airmelted + VAR

Properties

- > Toughness & Ductility : high
- > Wear Resistance : high
- > Machinability : good
- > Hot Hardness (red hardness) : high
- > Polishability : very high
- > Thermal conductivity : very high
- > Micro-cleanliness : very high

Applications

- > High Pressure Die-Casting
- > Gravity / Low Pressure Die-Casting
- > Progressive Forging (Hatebur)
- > Glasfibre reinforced plastics
- > Forging (Hot / Semi-hot)
- > Injection Molding
- > Extrusion
- > General Components for Mechanical Engineering
- > Press Hardening / Hot Stamping
- > Mechanical Engineering

Technical data

Material designation		Standards	
~1.2367	SEL	#207	NADCA
~X38CrMoV5-3	EN

Delivery condition

Annealed	
Hardness (HB)	max. 205

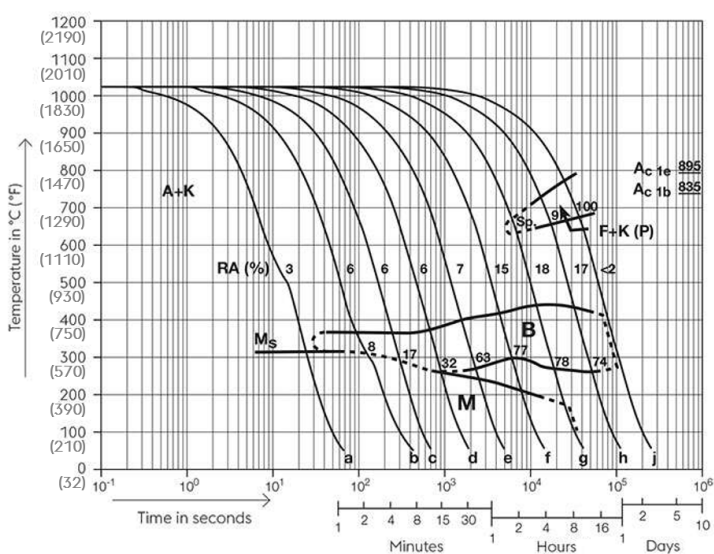

Heat treatment

Annealing		
Temperature	750 to 800 °C	Holding time 6 to 8 hours. Slow, controlled furnace cooling at 10 to 20°C/h (50 to 68 °F/hr) to approx. 600°C (1112°F), further cooling in air.
Stress relieving		
Temperature	600 to 670 °C	For stress relief after extensive machining or for complicated tools. Holding time depending on tool size after complete heating 2 - 6 hours in neutral atmosphere. Slow furnace cooling.
Hardening and Tempering		
Temperature	1,020 to 1,030 °C	Holding time after temperature equalization: 15 to 30 minutes; In order to prevent coarsening of the grain, hardening must be carried out at the recommended temperature; Quenching: oil, salt bath (500 - 550°C [930 to 1020 °F]), air, inert gas in vacuum; After hardening, required tempering treatment to achieve desired working hardness (see tempering chart).

Heat treatment sequence

Continuous cooling CCT curves

Austenitising temperature: 1025°C (1877°F)

Holding time: 15 minutes

5...100 phase percentages

0.5...180 cooling parameter, i.e. duration of cooling from 800 - 500°C (1472-932°F) in s x 10⁻²

Table:

Sample	λ	HV10	Sample	λ	HV10
a	0,1	686	f	23	529
b	0,4	643	g	65	494
c	1,1	619	h	180	465
d	3	624	j	400	234
e	8	615			

Physical Properties

Temperature (°C)	20
Density (kg/dm ³)	7.9
Thermal conductivity (W/(m.K))	29.8
Specific heat (kJ/kg K)	0.47
Spec. electrical resistance (Ohm.mm ² /m)	-
Modulus of elasticity (10 ³ N/mm ²)	211

Thermal Expansions between 20°C | 68°F and ...

Temperature (°C)	100	200	300	400	500	600
Thermal expansion (10 ⁻⁶ m/(m.K))	10.6	10.8	12	12.9	14.1	14.3

If other available product variants are listed in addition to long products, please note that these may differ in terms of melting process, technical data, delivery and surface condition as well as available product dimensions. For mandatory technical specifications, other requirements and dimensions, please contact our regional voestalpine BÖHLER sales companies. The data contained in this brochure is merely for general information and therefore shall not be binding on the company. We may be bound only through a contract explicitly stipulating such data as binding. Measurement data are laboratory values and can deviate from practical analyses. The manufacture of our products does not involve the use of substances detrimental to health or to the ozone layer.
