Product Description

BÖHLER K100 is a 12% ledeburitic chromium steel and corresponds to material number 1.2080 (X210Cr12). This commonly used tool steel is highly resistant to abrasive wear. Compared to modern cold work tool steels, BÖHLER K100 has the advantage of simple heat treatment with lower hardening temperatures and single tempering. However, this characteristic tempering behaviour limits the use of advanced coatings.

Process Melting

Airmelted

Properties

> Wear Resistance : good

Applications

- > Machine knife (for producers)
- > Standard Parts (Moulds, Plates, Pins, Punches)
- > Wear parts
- > Clamping
- > Wear Applications
- > Cold Rolling incl. Sendzimir Rolls
- > Rolling
- > Components for the recycling industry
- > Industrial Knives
- > Mineral Processing
- > Mechanical Engineering
- > Packaging industry
- > Fine Blanking, Stamping, Blanking
- > Rolls
- > Drilling
- > Pumping
- > Roll Forming
- > Cold Forming / Coining

Delivery condition

Annealed	
Hardness (HB)	max. 248

Heat treatment

Annealing

Temperature	800 to 850 °C	Slow controlled cooling in furnace at a rate of 10 to 20 °C/hr (18 to 36 °F/hr) down to approximately 600 °C (1112 °F) Further cooling in air.
-------------	---------------	---

Stress relieving

Temperature	650 °C	After through heating, hold in neutral atmosphere for 1-2 hours. Slow cooling in furnace Intended to relieve stresses caused by extensive machining or in complex shapes.
-------------	--------	---

Hardening and Tempering

Temperature	940 to 970 °C	Quenching: Oil, salt bath (220 to 250 °C or 500 to 550 °C 428 to 482 °F or 932 to 1022 °F), gas, compressed or still air if thickness does not exceed 25 mm (0,98 inch) and if hardening temperature is on the upper side of the range. Holding time after temperature equalization: 15 to 30 minutes. After hardening, tempering to the desired working hardness according to the tempering chart.
-------------	---------------	---

Tempering chart

Specimen size: square 20 mm (0,787 inch)

Slow heating to tempering temperature immediately after hardening.

Time in furnace 1 hour for each 20 mm (0,787 inch) of workpiece thickness but at least 2 hours.

Please refer to the tempering chart for guide values for the achievable hardness after tempering.

Tempering for stress relieving 30 to 50 °C (86 to 122 °F) below the highest tempering temperature.

Cooling in air after each tempering step is recommended.
