Product Description

BÖHLER K460 corresponds to the material 1.2510 (100MnCrW4, O1) and has comparable properties to the popular tool steel 1.2842. Additional alloying with tungsten achieves higher resistance to abrasive wear compared to the tool steel 1.2842. BÖHLER K460 offers the advantage of simple heat treatment with low hardening temperatures and single tempering. However, this characteristic tempering behaviour limits the use of advanced coatings. The material has a good hardening response, but only moderate through hardenability. BÖHLER K460 is used for punching and cutting tools, plastic molds, thread cutting tools and machine knives in the wood, paper and recycling industries.

Process Melting

Airmelted

Properties

- > Toughness & Ductility : high
- > Wear Resistance : good
- > Compressive strength : very high
- > Dimensional stability : good
- > Grindability : high

Applications

- > Fine Blanking, Stamping, Blanking
- > Machine knife (for producers)
- > Packaging industry
- > Standard Parts (Moulds, Plates, Pins, Punches)
- > Industrial Knives
- > Cold Forming / Coining
- > Tool Holders
- > Components for the recycling industry

Technical data

Material designation		Standards	
1.2510	SEL	4957	EN ISO
100MnCrW4	EN	A681	ASTM
T31501	UNS		
O1	AISI		
~SKS3	JIS		

Chemical composition (wt. %)

C	Si	Mn	Cr	V	W
0.95	0.25	1.10	0.55	0.10	0.55

BÖHLER K455	★★★	★	★★★★★	★	
BÖHLER K720	★★	★	★★★★	★	

Delivery condition

Annealed		
Hardness (HB)	max. 220	

Heat treatment

Annealing		
Temperature	710 to 750 °C	Slow controlled cooling in furnace at a rate of 10 to 20 °C/hr (18 to 36 °F/hr) down to approximately 600 °C (1112 °F) Further cooling in air.
Stress relieving		
Temperature	650 °C	After through heating, hold in neutral atmosphere for 1-2 hours. Slow cooling in furnace Intended to relieve stresses caused by extensive machining or in complex shapes.
Hardening and Tempering		
Temperature	780 to 820 °C	Quenching: Oil, salt bath (200 to 250 °C 392 to 482 °F) up to 20 mm (0,787 inch) thickness. Holding time after temperature equalization: 15 to 30 minutes. After hardening, tempering to the desired working hardness according to the tempering chart.
