

# OȚELURI PENTRU SCULE PENTRU LUCRU LA CALD

## Application Segments

Lucrări la cald

## Available Product Variants

Long Products

## Product Description

BÖHLER W320 ISODISC is a 3% chromium steel and corresponds to material number 1.2365 (32CrMoV12-28). This tool steel has good hot toughness as well as a very high hot hardness and resistance against heat-checkings. Compared to an X37CrMoV5-1 (material number 1.2343), the steel has an increased molybdenum content, which significantly increases its thermal resistance and thus makes it the ideal material in die closed- and open-die forging. Due to the lower chromium content, reduced through-hardening occurs which limits its applications to rather smaller tools.

## Process Melting

Aer topit

## Properties

- > Rezistență și ductilitate : good
- > Rezistență la uzură : high
- > Machinability : very high
- > Duritate la cald (duritate roșie) : high
- > Poluabilitate : good
- > Micro-curățenie : good
- > Conductivitate termică : very high

## Applications

- > Extrudare
- > Turnare sub presiune înaltă
- > Forjare (la cald / semi-cald)
- > Forjare progresivă (Hatebur)
- > Gravitate / presiune scăzută turnare sub presiune

### Delivery condition

Recoaptă	
Hardness (HB)	max. 229

### Heat treatment

Recoacere		
Temperature	750 to 800 °C	Holding time 6 to 8 hours. Slow, controlled furnace cooling at 10 to 20°C/h (50 to 68 °F/hr) to approx. 600°C (1112°F), further cooling in air.
Eliminarea stresului		
Temperature	600 to 670 °C	For stress relief after extensive machining or for complicated tools. Holding time depending on tool size after complete heating 2 - 6 hours in neutral atmosphere. Slow furnace cooling.
Călire și revenire		
Temperature	1,010 to 1,050 °C	Holding time after temperature equalization: 15 to 30 minutes; Quenching: Oil, salt bath (500 - 550°C [932-1022°F]), air, vacuum; After hardening, tempering to the desired working hardness (see tempering chart).

### Heat treatment sequence

### Continuous cooling CCT curves

Austenitising temperature: 1886°F (1030°C)  
Holding time: 15 minutes

### Tempering chart

#### Tempering:

Slow heating to tempering temperature immediately after hardening / time in furnace 1 hour for each 0,787 inch (20 mm) of work piece thickness but at least 2 hours / cooling in air. It is recommended to temper at least twice.

A third tempering cycle for the purpose of stress relieving may be advantageous.

1st tempering approx. 30°C (86°F) above maximum secondary hardness.

2nd tempering to desired working hardness.

The tempering chart shows average tempered hardness values.

3rd for stress relieving at a temperature 86 to 122°F (30 - 50°C) below highest tempering temperature.

Recommended tempering temperature range is indicated by the blue area in the chart.

Hardening temperature: 1030°C (1886°F)  
Specimen size: square 50 mm

Hot strength chart

Physical Properties

Temperature (°C)	20
Density (kg/dm <sup>3</sup> )	7.9
Thermal conductivity (W/(m.K))	30
Specific heat (kJ/kg K)	0.46
Spec. electrical resistance (Ohm.mm <sup>2</sup> /m)	0.37
Modulus of elasticity (10 <sup>3</sup> N/mm <sup>2</sup> )	215

Thermal Expansions between 20°C | 68°F and ...

Temperature (°C)	100	200	300	400	500	600	700
Thermal expansion (10 <sup>-6</sup> m/(m.K))	12	12.5	12.7	13	13.2	13.4	13.7

If other available product variants are listed in addition to long products, please note that these may differ in terms of melting process, technical data, delivery and surface condition as well as available product dimensions. For mandatory technical specifications, other requirements and dimensions, please contact our regional voestalpine BÖHLER sales companies. The data contained in this brochure is merely for general information and therefore shall not be binding on the company. We may be bound only through a contract explicitly stipulating such data as binding. Measurement data are laboratory values and can deviate from practical analyses. The manufacture of our products does not involve the use of substances detrimental to health or to the ozone layer.
