Product Description

BÖHLER W302 ISOBLOC is a 5% chromium steel and corresponds to material number 1.2344 (X40CrMoV5-1). Produced via the electroslag remelting process (ESR), this tool steel has very high hot toughness as well as very high hot hardness and a very good resistance against heat-checkings. The combination of these properties makes it a top performer in closed- and open-die forging as well as in high- and low-pressure die casting. In addition, this material has very good polishability and is therefore also often used as a molding material for plastic injection molds.

Process Melting

Airmelted + Remelted

Properties

- > Toughness & Ductility : high
- > Wear Resistance : high
- > English (United Kingdom) : very high
- > Hot Hardness (red hardness) : high
- > Polishability : very high
- > Thermal conductivity : good
- > Micro-cleanliness : high

Applications

- | | | |
|---|---------------------------------|--|
| > High Pressure Die-Casting | > Forging (Hot / Semi-hot) | > Gravity / Low Pressure Die-Casting |
| > Progressive Forging (Hatebur) | > Extrusion | > Fasteners, Bolts, Nuts |
| > General Components for Mechanical Engineering | > Injection Molding | > Press Hardening / Hot Stamping |
| > Rolling | > Industrial Knives | > Tool Holders (milling, drilling, turning & chucks) |
| > Standard Parts (Molds, Plates, Pins, Punches) | > Screws and Barrels | > Blow Molding |
| > Machine knife (for producers) | > Rolls | > Mechanical Engineering |
| > Hotrunner systems | > Glasfibre reinforced plastics | |

Delivery condition

Annealed	
Hardness (HB)	max. 229
Hardened and Tempered	
Hardness (HRC)	40 to 55 bars hardened and tempered (BHT)
Hardened and Tempered	
Hardness (HRC)	30 to 44

Heat treatment

Annealing

Temperature	750 to 800 °C	Holding time 6 to 8 hours. Slow, controlled furnace cooling at 10 to 20°C/h (50 to 68 °F/hr) to approx. 600°C (1112°F), further cooling in air.
-------------	---------------	---

Stress relieving

Temperature	600 to 670 °C	For stress relief after extensive machining or for complicated tools. Holding time depending on tool size after complete heating 2 - 6 hours in neutral atmosphere. Slow furnace cooling.
-------------	---------------	---

Hardening and Tempering

Temperature	1,020 to 1,080 °C	(Die casting equipment: 1020 - 1030 °C [1868 - 1886°F]) Holding time after temperature equalization: 15 to 30 minutes; Quenching: Oil, salt bath (500 - 550°C [932-1022°F]), air, vacuum; After hardening, tempering to the desired working hardness (see tempering chart).
-------------	-------------------	---

Tempering chart

Tempering:

Slow heating to tempering temperature immediately after hardening / time in furnace 1 hour for each 0,787 inch (20 mm) of workpiece thickness but at least 2 hours / cooling in air. It is recommended to temper at least twice.

A third tempering cycle for the purpose of stress relieving may be advantageous.

1st tempering approx. 86°F (30°C) above maximum secondary hardness.

2nd tempering to desired working hardness. The tempering chart shows average tempered hardness values.

3rd for stress relieving at a temperature 86 to 122 °F (30 to 50°C) below highest tempering temperature.

Recommended tempering temperature range is indicated by the blue area in the chart.

Hardening temperature: 1050°C (1922°F)
Specimen size: square 50 mm
