

Integrated Management System Policy

As a company of the voestalpine Group, the management of voestalpine Krems GmbH is equally committed to high standards of productivity, safety, health, quality, energy, and the environment.

- We operate an integrated management system to transfer our guidelines into concrete actions.
- We work on the continuous improvement of all products, processes and systems by applying principles of TQM (Total Quality Management). Continuous improvement is every employee responsibility on every level and in every area. It is the task of every manager to provide the right conditions to reach that goal and to be a role model.
- Through implementation and continuous improvement of our processes, reporting, investigations, implementing actions based on the investigations, we exert to identify avoid handle and manage incidents and nonconformity's in the meaning of sustainability also through updating our integrated Management system.
- We cultivate our employee's knowledge and sense of responsibility and encourage teamwork on all levels.
- Measurable targets and their periodic revision enable us to control target achievement.
- To fulfill our Quality,- safety, health-, energy- & environmental goals as well as the expectations of customers, society, employees, suppliers and shareholders we incorporate these interested parties in the process.
- We produce and sell goods as well as services,
 - which are produced or provided by employees who are aware that every accident and damage of health is avoidable.
 - which – in the sense of a zero defect philosophy – completely meet our customer's quality requirements.
 - which minimizes the burden to humans and environment by an economic input of raw materials and energy in our production process. Additionally we are constantly optimizing our processes and procedures in order to further reduce the effects on our environment.
- We commit us to
 - adequate appropriation for safe and health working conditions, especially in common circumstances which may lead to an episode for health like a pandemic.
 - the prevention of working based injuries and illness.
 - early reaction to realize and remediate dangers within the meaning and arguably of our employees concerning the existing risks and chances
- The reduction of the environmental impact and continuously improving of our energy performance using the best available and economically viable technology and digitalisation is just as natural for us as also complying with all applicable laws, requirements, conditions and regulations. This also includes the processes relating to the procurement of raw materials and the procurement of efficient operating systems.
- We hold an open and factual dialog with our customers, partners, public authorities, neighbors and the public.
