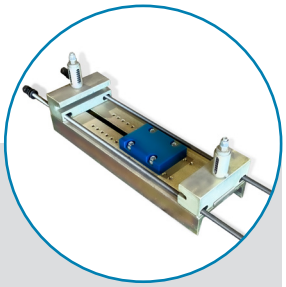
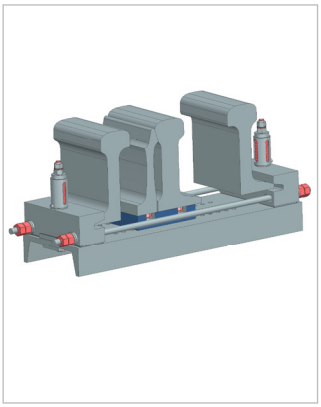
MPF SLIDE POINT ROLLER



Description

The MPF Slide is designed to reduce friction acting on moveable point frogs, helping minimize maintenance requirements and reduce the need for lubrication. It utilizes a bottom-up lifting design that supports the point during movement, promoting smoother operation and reducing sliding friction between contact surfaces.

Its straightforward retrofit design allows installation on existing moveable point frog turnouts without requiring custom tie plates.



Features and Benefits

» Reduces friction acting on moveable point frogs

» Helps minimize maintenance and lubrication requirements

» Straightforward retrofit installation on existing moveable point frogs

» Bottom-up design clamps to the rail base within the tie crib

» Gently lifts the point during movement

» Provides standard vertical point lift of 1/16"

» Adjustable in 1/32" increments

» Laterally adjustable to optimize point lift

» No custom tie plates required

» Easy to inspect and maintain

» Buy America compliant: designed, tested, and manufactured in the USA
