Precision cut length and Bars**

***) experts for experts: Let's talk about precision cut length.**

As specialists in processes and materials, we develop product solutions tailored to the individual needs of our customers, adapted to ever-growing requirements and geared toward ensuring the increased market presence of our customers. Long-term partnerships, high quality standards and innovations make us a professional partner to industry.

Tailor-made solutions within the group of companies

At international locations in North America, Europe and China, the voestalpine Rotec Group processes precision steel tubes into precision cut lengths and ready-to-install tubular components using the most varied range of materials.

Many years of experience and in-depth expert knowledge guarantee tailor-made product solutions and professional services. Customer enquiries are checked individually within the company group and are implemented at the location which offers the best production processes from a technical and cost-efficiency point of view.

At the same time, the customer profits from the technological diversity which exists within the group and from customer-oriented care.

Raw material for processing

- Carbon steel
- Aluminium
- High alloyed steel

Areas of application

Amongst other sectors, voestalpine Rotec's precision cut length products are used in the domestic appliance industry and mechanical engineering. However, the automotive and automotive components supplier industries represent the significant area of use for precision cut lengths. Tubular components are used in the following areas:

- Vehicle chassis
- Braking systems
- Steering systems
- Anti-vibration systems (wheel suspension, shock absorption)
- Power train
- Gear box

Processes

The voestalpine Rotec Group's individual locations are equipped with state of the art production machinery. The following processes are used either separately or on an integrated basis to achieve efficient production concepts:

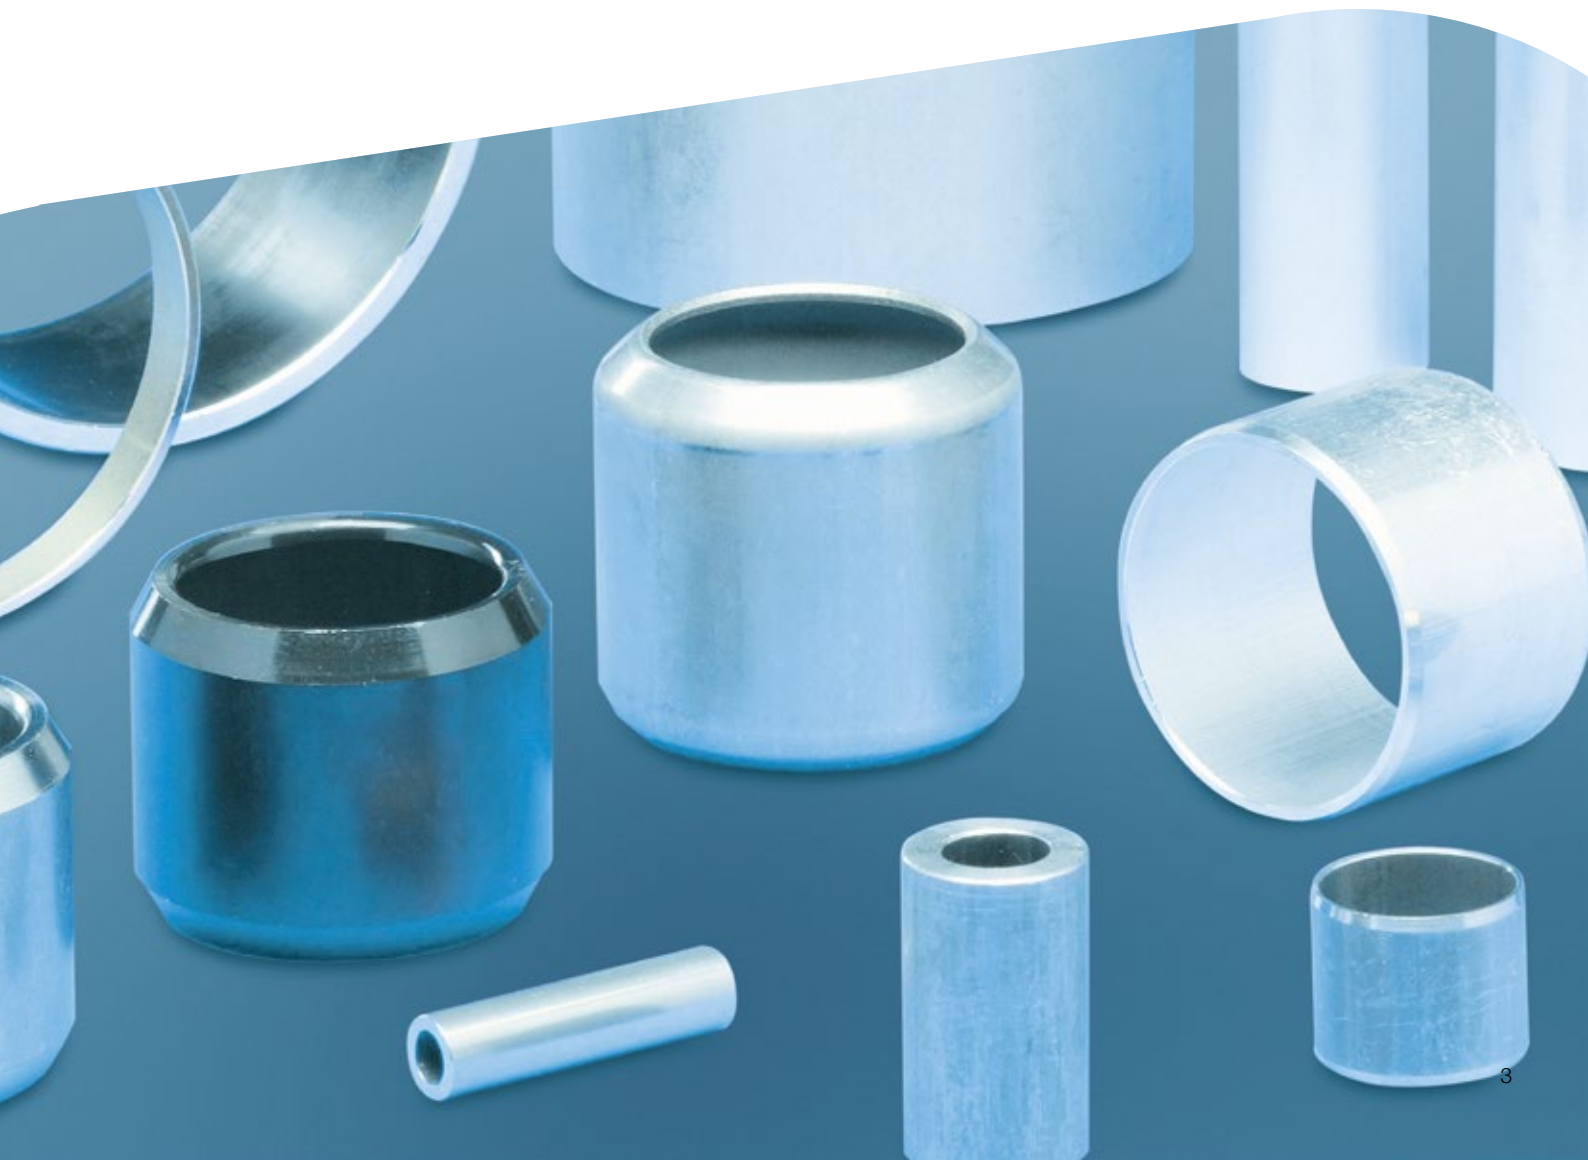

- Degreasing/Washing
- Cutting and sawing
- Laser cutting
- Chamfering
- Deburring
- Punching
- Pressing
- Milling
- Turning

Our advantages

- High level of material expertise
- Versatile range of dimensions maintaining the closest tolerances
- The most diverse tube cutting processes
- Security of supply due to high production capacity and utilisation of synergies within the group of companies
- High level of service skill
- Global network with locations in Europe and the USA

Our network, know-how and experience make us what we are: ***) experts for experts.**
