FURTHER MANIPULATIONS

FACTBOX:

- + Several multistack robotised rotary draw benders in different sizes and diameters
- + Freeform bending, an ideal process for 3D bent parts
- + Rollbenders
- + 3D lasers
- + Drilling/punching holes, punching numbers, thread tapping, insert mounting, ...
- + Automated miter cutters
- + Manual and robotised welding

UNLIMITED POSSIBILITIES

Willem Gyssels, Engineering Manager Final Operations

“As an engineering manager for Further Manipulations, it is a privilege to work closely together with customers during the whole process of co-engineering, through prototyping to serial production.”

In an ongoing process and together with our partners, we are seeking to improve our machines in different ways: faster, more accurate, more reliable, etc. This not only to fulfil the current market needs, but also to be prepared for the future customer demands.

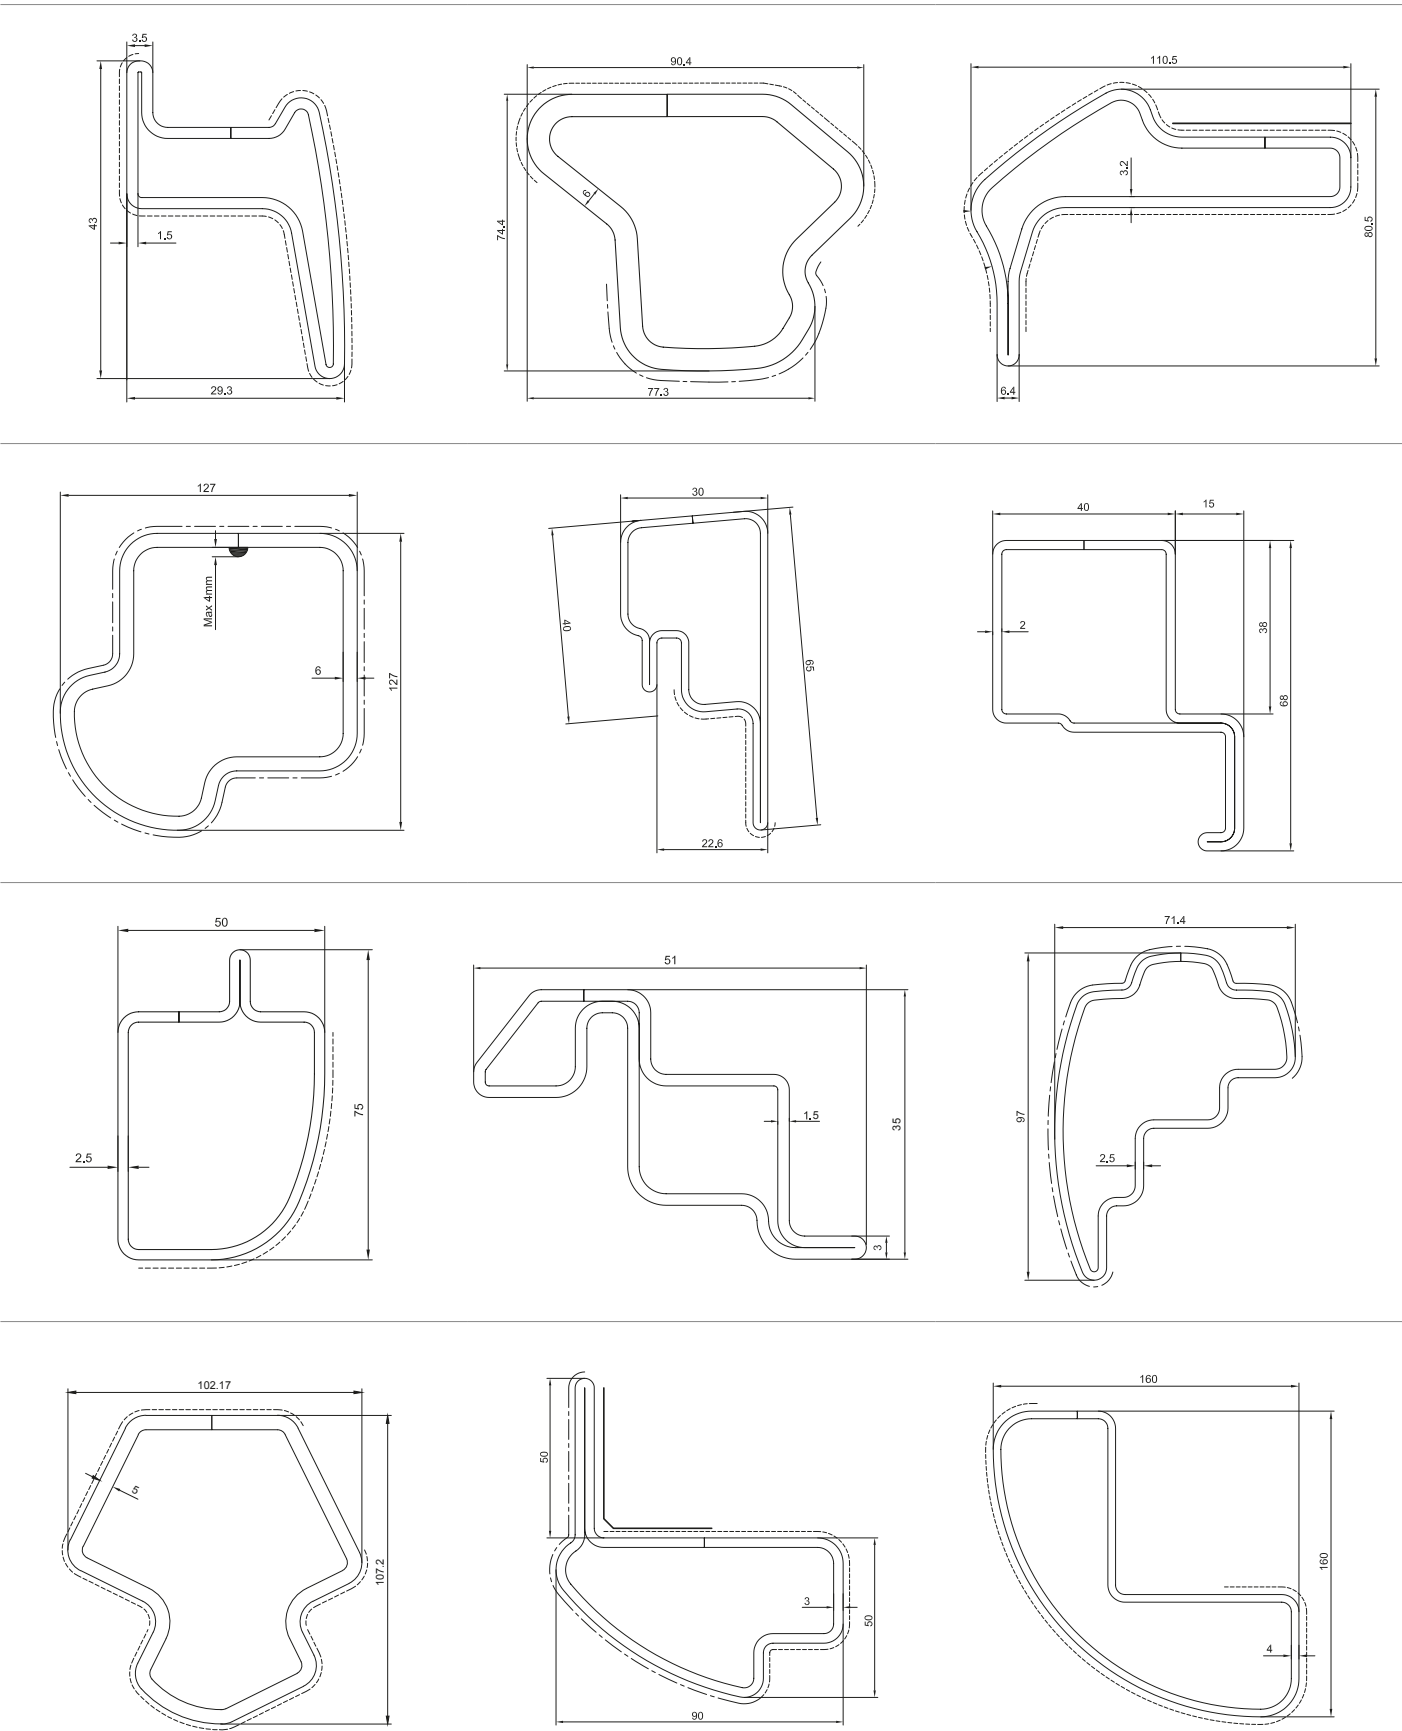

With the current available equipment, we can offer our customers special sections in all kind of bent shapes, cut to length or lasered end shapes, finished with threaded holes, inserts, welded brackets and many more.

In other words we are your perfect partner for fully finished ready-to-assemble components for either a bolted or (robot

welded steel construction, such as safety cabins for both yellow or green goods, forklifts, trucks, etc. To make all of this possible, with the narrowest tolerances, we feature fully automated state of the art equipment.

“IN A CUSTOMER-SUPPLIER TEAM AND OFTEN ON SHORT TERM, WE DEVELOP COMPONENTS, TOOLS & MACHINES ACCORDING TO NEEDS, VOLUMES, TOLERANCES, ETC.”
