colofer® CASING

More than just overall protection and aesthetics

Organic coated steel strip

colofer® CASING factsheet | 7/2019

colofer® CASING IS THE EFFICIENT REPLACEMENT FOR POWDER-COATED HOUSINGS.

colofer® CASING is the efficient replacement for powder-coated housings in indoor applications. You can significantly reduce your costs and increase efficiency by switching from powder coatings to colofer® CASING, the pre-painted steel strip made by voestalpine. colofer® CASING is characterized by particularly high scratch resistance and can be processed without the use of any protective film.

With the help of the colofer® color service, the desired color shade can be easily reproduced and, thanks to our Steel Service Center, the product can be supplied in coils, sheets or slit strip.

Wide range of colors

colofer® CASING provides flexible support for new dimensions, components or product ranges and an almost unlimited selection of colors (including metallic).

Highest degree of functionality

colofer® CASING can be processed in many different ways. Forming is possible with the narrowest bending radii, deep drawing or roll-forming.

Flexibility in production operations

Your changing demands can be flexibly met with colofer® CASING, and bottlenecks can be avoided during the painting process.

Compliance with all environmental regulations

colofer® CASING complies with RoHs regulations, REACH requirements and environmental management standards. This way you factor out all the environmental restrictions connected with the painting process.

Simplified logistics and a coordinated package

By choosing colofer® CASING, you bundle the logistics of all the required steel products and profit from a comprehensive package that includes steel grades adapted to your specifications and a coating that is perfect for all your requirements.

Certifications

colofer® CASING has been awarded the following certifications: Fire protection class A1, EPD, LEED, BREEEAM.

Cost savings

The use of pre-coated steel strip both increases quality and reduces costs. Analyses show potential savings of up to 30 percent.
