In-Depth Know-How

## Your Added Value: Fontargen Brazing Application Services

## Product and technical consultation

The optimal solution for your requirements

Our experts advise which filler material is optimal for our customers' base material, taking into account technical requirements specified for the brazing task, while observing process efficiency and relevant standards

### Services

- Selection of the Fontargen Brazing product to meet the required classification
- Review of technical feasibility and economic efficiency
- Verification of compliance with operating standards, industry specific procedures etc.
- Advice on the application of the individual product
- After Sales Service: In addition to our brazing recommendations, we provide information on proper storage and handling and assist with any questions as well as trouble shooting.

## Process optimization

Brazing with highest efficiency

Not only what you do is important – how you do it, is decisive. Our application technicians/engineers are able to review your complete brazing process and propose and implement concrete solutions for optimization. Brazing defects and downtime are reduced and productivity increased.

### Services

- Process consultation (analyses, productivity audit)
- Development and implementation of concrete brazing process adaptations, in close co-operation with the customer.

## Education and training

Exchange of know-how to stay ahead

Each brazing result is as good as the person who is responsible for it. In the Application Technology Centers of our Academy, we teach the skills that make our clients' technicians and enterprise benefit in the long run. Individual education and training can also be given at the site of our customers, to guarantee best results with the available brazing equipment.

### Services

- Individual product and brazing training.
- In our worldwide Application Technology Centers or at the customers' premises.
