Welding wires from voestalpine Böhler Welding can be supplied in special volume packaging in the form of round, square and octagonal drums with filling contents from 100 up to 500 kg, depending on wire type and diameter. They provide efficient MIG/MAG welding, especially in mechanized and robotic operations where the elimination of time consuming wire spool exchanges yields drastically increased duty cycles and production output.

Drum solutions are offered across the wire ranges of our three category brands – Böhler Welding, UTP Maintenance and Fontargen Brazing – covering non and low-alloyed, stainless, aluminium, nickel-base and copper-base main wire types for welding, cladding, hardfacing and brazing. The range includes solid wires, flux and metal-cored wires and submerged arc welding wires. A range of accessories for efficient internal transport and installation of the drums is available, including a choice of different “click and go” liner types to connect the drums with the wire feed unit. Additional with the Böhler LD feed we offer a smart way to ensure trouble free wire transport even over long distances.

Our drum systems are available for:
STREAMLINE YOUR WELDING OPERATIONS.

Increased net arc time

Drastically reduced downtime for wire spool exchange is a major and most obvious saving when using drums instead of 18 kg wire spools. With the 500 kg drum, you will avoid 26 spool changes of roughly ten minutes each, while the 250 kg drum accounts for a gain of 13 spool changes. The result is 260 or 130 more minutes of net arc time and a correspondingly higher duty cycle and production output. Use of the drums will thereby immediately lower your welding costs and improve your company’s competitive edge.

However, there is much more to be gained. The implementation of our drum systems – with high quality welding wires and dedicated accessories – will streamline your entire MIG/MAG welding operation, as summarized by the table.

A CHOICE OF ROUND AND OCTAGONAL DRUMS

Welding wire drums from voestalpine Böhler Welding are either round, square or octagonal. They are made from environmentally friendly materials and can be used with the same set of accessories. Round drums are very strong and are a good option for tough transport and workfloor conditions. Square and octagonal drums are fit for general use under controlled transport and work floor conditions.

The latter is foldable when empty, taking minimal storage space until disposal. Drum components are fully recyclable. Both drum types are offered across the wire ranges of our three category brands, as shown by the table. Two drums are packed on a returnable Europallet (1200 x 800 cm). voestalpine Böhler Welding drum solutions: wire types and material across the programmes of our three category brands Böhler Welding, UTP Maintenance and Fontargen Brazing.

ACCESSORIES FOR SAFE AND EFFICIENT TRANSPORT

Böhler Lift 250
Newly designed light-weight lifting bar according to EN 13155 for easy and safe transport of Böhler Welding BASEdrum™, CLIMAdrum™ and ECOdrum™ by fork lift truck or overhead crane. CE approved.

Art. Nr. 28373: Böhler Lift 250

Trolley Universal
Universal hand-pushed trolley for all types and sizes of round and octagonal drums.

Art. Nr. 28549: Trolley Universal
A dedicated selection of professional liners, connectors and adapters allows the installation of drums in almost any production set up.

<table>
<thead>
<tr>
<th>Accessory</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Hood</strong></td>
<td>Universal hood of rigid plexiglass for round and octagonal 100 and 250 kg drums. Enhances smooth wire pay-off and protects against contamination of the wire. Work opening covered with plastic flap.</td>
</tr>
<tr>
<td><strong>Pro Liner Connect</strong></td>
<td>“Click &amp; go” spiral liner of hardened steel with rounded edges for non, low and medium-alloyed wires. Length 5 m. Comes with drum-hood connector, quick coupling and universal connector for wire feeders. Durable liner, even under extreme conditions. Tolerates strong robot arm movements over extended periods. 5 m extension set can be ordered separately.</td>
</tr>
<tr>
<td><strong>Premium Liner Connect</strong></td>
<td>Innovative “click &amp; go” liner for feeding without any friction and lowest liner wear. Features internal rollers placed in line under a 90 degree angle. For any type of welding wire. The ultimate solution for any feeding challenge. Comes with drum hood connector, quick coupling and universal connector for wire feeders. Ideal for long time uninterrupted feeding, while allowing highly dynamic robot arm movements. Can be ordered in individual lengths (minimum 3 m).</td>
</tr>
<tr>
<td><strong>Soft Liner Stainless Connect</strong></td>
<td>“Click &amp; go” polyethylene liner for stainless, aluminium and copper-alloy wires. Length 5 m. Comes with drum-hood connector, quick coupling and universal connector for wire feeders. Couplings are insulated to avoid direct contact between wire and coupling. 5 m extension set can be ordered separately.</td>
</tr>
<tr>
<td><strong>Premium Liner SAW Connect</strong></td>
<td>Innovative “click &amp; go” liner for feeding without any friction and lowest liner wear. Features internal rollers placed in line under a 90 degree angle. For any type of submerged arc welding wire up to 4.0 mm diameter. The ultimate solution for any SAW feeding challenge. Comes with drum-hood connector and special SAW quick coupling. Ideal for long time uninterrupted feeding. Can be ordered in individual lengths (minimum 3 m).</td>
</tr>
<tr>
<td><strong>Wire Straightener</strong></td>
<td>For use with soft wires e.g. aluminium and copper-base. Removes spooling deformation and delivers straight wires into the liner and feeding unit. Comes with quick coupling to fit on drum-hood connector and liner. Connector sets for different liner types available.</td>
</tr>
<tr>
<td><strong>Böhler Welding LD Feed</strong></td>
<td>The Böhler Welding LD Feed is a smart booster which supports wire feeding in most demanding set ups. Supports MIG and cold and hot wire TIG processes.</td>
</tr>
<tr>
<td><strong>Böhler Welding LD Glide</strong></td>
<td>Böhler Welding LD Glide is a highly professional wire conduit offering perfect long distance feeding for stable welding processes. It is the most perfect connection between the voestalpine Böhler Welding wire drums and robotic systems for any type of welding wire. Connectors for different wire feeders are available. Can be ordered in individual lengths (minimum 3 m).</td>
</tr>

</table>

Installation Guide: [https://www.youtube.com/user/voestalpinewelding](https://www.youtube.com/user/voestalpinewelding)
3-STRAP-TECHNOLOGY

Wire drums promise trouble free welding for longer periods of time. Nevertheless there are numerous parameters influencing the expected result.

It starts with the production of the wire and the spooling of the drums in the mill; the way of handling the drum during transport and storage can influence the pay-off behavior of the welding wire. Last but not least, the wire guiding system, feeder, liner and torch can have a significant impact on the result.

The Böhler Welding drums are designed for maximum reliability. Using the latest know-how of wire feeding technology.

The 3-strap-technology makes the pay-off ring on top of the wire to be guided by three straps instead of the normally attached foam.

Consequently pay-off is extremely reliable as there is no undefined friction between the ring and the drum. The wire comes off very consistent and requires a minimal feeding force only.

Another distinct benefit of this 3-strap-technology is that the wire cannot come off between the ring and the drum.
NINE SIMPLE STEPS TO INSTALL

1. Remove the perforated instruction panel and take remainder of lid from the drum.
2. Cut the wire loose.
3. Remove fixation bar.
4. Take drum-hood connector from liner.
5. Attach drum-hood connector to de-coiling hood.
6. Place the de-coiling hood.
7. Place lid over the cone back onto the drum.
8. Click the selected liner onto the hood.
9. Feed the wire through the liner.

Alternative Steps for round drums:

6. Open fixation ring and remove lid.
7. Place cone and close fixation ring.

The Böhler Welding LD Glide and LD Feed wire guiding system comes with a number of easy to use quick connectors and expert support to match each individual architecture for a perfect long service installation.

Böhler Welding LD Feed is a smart booster which supports wire feeding in most demanding set ups. Operation in both MIG and hot and cold wire TIG processes is possible. It is positioned above the wire drum and feeds into the Böhler Welding LD Glide.

The Böhler Welding LD Feed operates independently from the installed welding equipment and records productivity and welding data. Communication within the production IT environment is easy through Ethernet and USB connectivity.

Full control of the welding process is possible, even from remote. The smart LD Feed booster can send SMS and mail alerts in case parameters run out of preset parameter fields. Böhler Welding LD Glide is a highly professional wire conduit offering perfect long distance feeding for stable welding processes. It is the most perfect connection between the Böhler Welding wire drums and robotic systems for any type of welding wire. Connectors for different wire feeders are available. The Böhler Welding LD Glide can be ordered in variable lengths.
ALWAYS THE CORRECT WELDING WIRE

As an option for fabricators with high safety and quality assurance demands in serial production, we can supply our welding wire in round and octagonal drums equipped with RFID (Radio Frequency Identification) labels. They can be used for standard bar code reading and/or RFID scanning, but also in combination with our ViewSystems MESprotect for automatic material identification.

MESprotect is a quality assurance device that guarantees the use of the correct welding wire in serial fabrication, by excluding human errors. In case of a wrong supply, MESprotect will immediately stop the welding station, thereby avoiding costly re-work and possible future claims.

What RFID labels do for you

» When reading the RFID label there is a clear designation of the material grade, diameter and packaging to EAN/GTIN.
» The data is identified according to the GS 1-128 code.
» A prerequisite for using the RFID label is that the supplier uses an identifier and the use of a parser reader to be able to read the data.
» The content of the RFID label provides the ability to automatically scan if the right welding consumable/material grade and article is used for a specific welding task in production.
APPLICATION SERVICES – YOUR ADDED VALUE.

Böhler Welding offers more than best-in-class welding consumables, because in practice, only perfect welds and highest process efficiency count. We are able to guarantee this through our outstanding application support for customers in all branches of industry worldwide.

Our application services provide:

**Product and technical consultation**

**The optimal solution for your requirements**
Our experts advise which filler material is optimal for our customers’ base material, taking into account technical requirements specified for the weld, while observing process efficiency and relevant standards.

**Services**
- Selection of the Böhler Welding product to meet the required classification.
- Review of technical feasibility and economic efficiency.
- Verification of compliance with operating standards, industry specific procedures etc.
- Advice on the application of the individual product.
- After Sales Service: In addition to our welding recommendations, we provide information on proper storage and handling and assist with any questions as well as trouble shooting.

**Process optimization**

**Welding with highest efficiency**
Not only what you do is important – how you do it is decisive. Our application technicians/engineers are able to review your complete welding process and propose and implement concrete solutions for optimization. Weld defects and downtime are reduced and productivity increased.

**Services**
- Process consultation (analyses, productivity audit).
- Development and implementation of concrete welding process adaptations, in close co-operation with the customer.

**Education and training**

**Exchange of know-how to stay ahead**
Each weld is as good as the person who is responsible for it. In the Application Technology Centers of our Welding Academy, we teach the skills that make our clients’ technicians and enterprise benefit in the long run. Individual education and training can also be given at the site of our customers, to guarantee best results with the available welding equipment.

**Services**
- Individual product and welding training.
- In our worldwide Application Technology Centers or at the customers’ premises.

Take advantage of our application services

WELDING ACADEMY – JOIN THE PATH TO EXCELLENCE.

The Welding Academy is the voestalpine Böhler Welding educational institute where customers and partners are trained in the use of Böher Welding, UTP Maintenance and Fontargen Brazing branded products for their individual industrial applications. This exclusive service guarantees customers the highest level of consulting and support.

Its goal is to generate and transfer specialist know-how, as well as providing practical training courses. Content, duration and scope are all adapted to your particular needs. One-to-one or group tuition, at one of our sites or on your company premises. Our aim is to provide customized training courses which help our customers and partners to fulfil their tasks over the long term.

Focus & offerings

» Joint welding – Training covers all standard arc welding processes including SMAW, MIG/MAG, TIG and SAW.
» Repairs and hardfacing – Focus on courses in repair welding, corrosion and wear protection applications and thermal spraying (PTA).
» Brazing and soldering – The seminars focus on all standard brazing processes used in tool manufacture, automotive and HVACR.
» Materials science & process training – Metallurgical courses on weldable base materials, from unalloyed steels through to NiBas alloys.
» Product training – The training courses cover the basic features and optimum handling of electrodes, solid and flux-cored wires, TIG rods, strips and fluxes.
» Industry-specific seminars & workshops – These training sessions focus on the welding challenges faced in particular industries.
» Webinars – Transmitting expertise in a quick and efficient manner saves time and money.

JOIN! voestalpine Böhler Welding

With over 100 years of experience, voestalpine Böhler Welding is the global top address for the daily challenges in the areas of joint welding, repair, hardfacing and cladding as well as brazing. Customer proximity is guaranteed by more than 40 subsidiaries in 25 countries, with the support of 2,200 employees, and through more than 1,000 distribution partners worldwide. With individual consultation by our application technicians and welding engineers, we make sure that our customers master the most demanding welding challenges. voestalpine Böhler Welding offers three specialized and dedicated brands to cater our customers’ and partners’ requirements.

Lasting Connections – As a pioneer in innovative welding consumables, Böhler Welding offers a unique product portfolio for joint welding worldwide. More than 2000 products are adapted continuously to the current industry specifications and customer requirements, certified by well-respected institutes and thus approved for the most demanding welding applications. As a reliable partner for customers, “lasting connections” are the brand’s philosophy in terms of both welding and people.

Tailor-Made Protectivity™ – UTP Maintenance ensures an optimum combination of protection and productivity with innovative and tailor-made solutions. Everything revolves around the customer and their individual requirements. That is expressed in the central performance promise: Tailor-Made Protectivity™.

In-Depth Know-How – As a leading brand of soldering and brazing consumables, Fontargen Brazing offers proven solutions based on 50 years of industrial experience, tried and tested processes and methods. This In-Depth Know-How has made Fontargen Brazing an internationally preferred partner for every soldering and brazing task.
